Plasma Donation after COVID-19 Recovery

Help other COVID-19 patients recover by donating your blood plasma

Blood plasma from patients who have recovered from COVID-19 may contain antibodies that could help hospitalized patients currently fighting the disease. Sharp is working with the San Diego Blood Bank to collect plasma and provide it to currently ill patients.

- To donate plasma, you must be symptom free for at least 28 days following a confirmed *positive* laboratory test for COVID-19, be eligible to donate blood and meet all other routine donor criteria.

To determine your eligibility, please visit sandiegobloodbank.org/donateplasma.
